                                                                                                                                                                                                        This cDNA sequence codes for human DNAX Vic-1 (DVic-1) (see AAW60649), a novel C-C chemokine. DVic-1 cDNA can be obtained from e.g. skin, epithelial or wound healing libraries by PCR amplification or by hybridisation. 2 ESTS (see AAV38292-93) were obtained from a human foetal heart library and a human osteoblast library. These show compared, and are probably ESTS from a similar transcript. The chemokine motifs of these 2 ESTS were compared, and a consensus sequence was derived and confirmed as encoding DVic-1. The DVic-1 gene has been localised to human chromosome 9p13. An alternative in onger transcript (see AAV38296) for human DVic-1 is also disclosed. Also claimed is novel human DNAX Groin Wound expressed CC chemokine (DGWCC) (see AAW60649), as well as expression vectors and host cells.
                                                                                                                                                                                                             (see AAW60649),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tacttcccattgcctccagctgttgcacggaggtttcacatcatatttccagaaggctcc 272

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      neuronal or haematopoietic cells, e.g. lymphoid cells, which affect immunological responses. They can be used in the treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions or degenerative conditions. Abnormal proliferation, regeneration, and atrophy may be modulated by appropriate therapeutic treatment using products of the invention. The products can also be used for detection, diagnosis and drug
                                                                                                treating abnormal physiology or development, e.g. cancerous or degenerative conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tggaaagagtgaatatgtgtcgcatccagagagctgatggggattgtgacttggctgctg

Modulating cell movement within the skin, useful for treating immunological skin conditions or diseases comprises administering T cell-attracting chemokine or vasoactive intestinal contractor chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Morales JM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modulating movement of a cell within or to the skin of a mammal can be achieved by administering an antagonist or agonist of cutaneous T cell-attracting chemokine (CTACK) or vasoactive intestinal contractor (Vic) chemokine. The antagonist is selected from a mutein of natural CTACK or Vic, an antibody which neutralises CTACK or Vic or an antibody which neutralises CTACK or Vic an antibody can block EPR2 ligand binding. The CTACK or Vic agonists or antagonists are useful for treating medical conditions or diseases associated with immunological conditions of the skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Integrated GPR27. GPR27 has antimidrophial, analgasic, cytostatic, antidiabetic, ancectic, antiasthmatic, antiparkinsonian, cardiant, hypotensiave, diuretic, osteopathic, cerebroprotective, antidiabetic, antidiabetic, antidepressant, antidepressant, neuroleptic, nootropic and anticonvulsant activities, and can be used in producing vaccines and in gene therapy. The GPR27 protein and polynucleotide are useful for treating certain diseases or as vaccines against these diseases. These diseases include bacterial, fungal, proteins are useful for treating certain diseases or as vaccines against these diseases. These diseases include bacterial, fungal, proteocoan or viral (e.g. infections caused by HIV-1 or HIV-2) infections, pain, cancers, diabetes, obesity, anorexia, bulinia, asthma, Parkinson's disease, acute heart failure, hypotension, hypertension, urinary cretention, osteoprorsis, anglian pectoris, myocardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders (e.g. anxiety, schizophrenia, manic depression, depression, delirium, dementia or mental retardation), or dyskinesias (e.g. Huntington's disease or Gilles de la Tourette's sydrome). The polynuchectide may also be used for chromosome
                              upled receptor GPR27 polypeptides and polynucleotides, as or for treating diseases, e.g. infections, pain, retention, osteoporosis, stroke, psychotic and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cancer-associated nucleic acid molecules (N) and proteins (P), where cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. And P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P carperssion. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing that the nucleic acids into a host cell and culturing the cell of or express the proteins. N and P can be used in the prevention, diagnosis and ABB7789 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antinflammatory; antinheumatic; cells they are expressed in, such as: antinflammatory; antinheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; cardiant; cardiant; antianaemic; antiaggregant; haemostatic; vulnerary; antidiabetic; osteopathic; antiaggregant; haemostatic; uninerary; antidiabetic; cytostatic; neuroprotective; antidiabetic; uninerary; antidiabetic; cytostatic; neuroprotective; antidiabetic; osteopathic; dermatological; antidiabetic; antidiabetic; optostatic; neuroprotective; antidiasematic; antidiabetic; osteopathic; dermatological; antidiabetic; osteopathic; dermatological; antidiaperessant; nootropic; antidiabetic; cytostatic; neuroprotective; antidiaperessant; nootropic; conding them can be used in gene therapy antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for production, The proteins and polynucleotides are useful for screening for conding arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, canaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, costeoporosis, severe combined immunodeficiency, eczema, allergic

human secreted proteins, and encode the proteins given in AAY1531 to human secreted proteins, and encode the proteins given in AAY11533 to AAY11679, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted human gene products. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, hemotopies regulating activity, tissue growth regulating activity, hemotopies activity, anti-inflammatory activity, tumour inhibition activity or other activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping prometer sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell. haemostatic; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; hematopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostat thrombolytic; anti-inflammatory; tumour inhibition; ds. homology with hTECK (20% identity). GFRP-2 and hTECK are both basic proteins, having isoelectric points of 10.1 and 10.2, respectively. GFRP-2 was found by Northern analysis to be expressed in both tumorous and nontumorous breast tissue. GFRP proteins (AAB03000-B03003), nucleotides encoding them (AAA52455-A52458), GFRP agonists and antagonists may be used to treat a wide variety of diseases associated with increased or decreased expression or activity of GFRP proteins. Conditions which may be treated include developmental disorders, cell proliferative disorders (e.g., cancers), immune disorders (e.g., allergies, asthma), reproductive disorders (e.g., menstrual cycle disorders) cardiovascular disorders (e.g., arteriosclerosis) and bacterial, viral, fungal or parasitic infections. Additionally, GFRP proteins and nucleotides can be used in the diagnosis of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              396

                                      The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating clisorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conditional coding sequences of the invention.

The invention provides an isolated human chemokine, which is preferentially expressed in breast tissue or detected in breast milk. An antibody that recognizes the novel chemokine, or a chemokine-derived antibonize peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can also be used to treat breast disease. Antiponic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine can be used to vaccinate patients against breast disease. The chemokine polynucleotide sequences and the chemokine protein can be detected in samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding cystitis, and benign hyperplasias as well as other malignancies. The present sequence represents the nucleotide sequence of the human mammary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A mammary associated chemokine and related polynucleotides, useful for detection and treatment of breast disease, especially cancer
                                                                                                                                                                                                                                           Chemokine, breast tissue, breast milk, breast disease, vaccine, liflammation, infection, mastitis, benign cystitis, hyperplasia; mammary associated chemokine; MACK; ss.

The invention provides an isolated human chemokine, which is preferentially expressed in breast tissue or detected in breast milk. An antigody that recognizes the novel chemokine, or a chemokine-derived antigonic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can also be used to treat breast disease. Antigonic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine can samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding polynucleotides include inflammations, infections, mastitis, benign polynucleotides include inflammations, infections, mastitis, benign present sequence represents the human manmary associated chemokine present sequence.

The invention provides an isolated human chemokine, which is preferentially expressed in breast tissue or detected in breast milk. An antibody that recognizes the novel chemokine, or a chemokine-derived antigenic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a callular receptor for the chemokine, can also be used to treat breast disease. Antigenic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine polynucleotide sequences and the chemokine protein can be detected in samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding polynucleotides include inflammations, infections, mastitis, benign cystitis, and benign hyperplasias as well as other malignancies. The present sequence represents an antisense riboprobe that hybridises to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              328 tgctgtcatccttcatgtcaagcgcagaagaatctgtgtcagcccgcacaaccatactgt

The polynucleotide and polypeptide are useful for screening agonists and antagonists of Rintintin and are also useful as vaccines in treating various diseases, such as allergies, asthma, atherosclerosis, autoimmune disease, cancer, osteoarthritis, various infections, psoriasis, rheumatoid arthritis, and vascular disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.

The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AsS64197-AsS4564 represent novel human amino acid sequences. AsS64197-AsS4564 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                           Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

This sequence represents a breast specific gene (BSG) clone. The BSG sequences are also referred to as breast specific markers (BSM). The invention relates to methods for diagnosing, monitoring, staging, imaging and treating breast cancer (BC). The methods comprise measuring the alto comparing the measured levels of BSG products in cells, tissues or body fluids of the patient and comparing the measured levels of BSG levels of a normal human control. An antibody against the BSG sequences can be labelled and used for imaging BC in a patient. The antibody can be conjugated to a

AAX51459 to AAX51691 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAX12681 to AAX12913. respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, coll proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, receptor/ ligand activity, haemostatic and thrombolytic activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a

                                                                                                                                                                                                                                                                            The invention provides an isolated human chemokine, which is preferentially expressed in breast tissue or detected in breast milk. An antibody that recognizes the novel chemokine, or a chemokine-derived antibody that recognizes the novel chemokine, or a chemokine-derived antibodize peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can also be used to treat breast disease. Antipodic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine polynucleotide sequences and the chemokine protein can be detected in samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease, other breast diseases that may be treated or detected with the chemokine and its encoding cystitis, and benign hyperplasias as well as other maintains mammary present.
                                                                                                                                                                                               mammary associated chemokine and related polynucleotides, useful r detection and treatment of breast disease, especially cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3117 BP; 860 A; 582 C; 566 G; 921 T; 188 other;

                                                                                                                                                                                                                                                                    AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, and angains and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inscribing the nucleic acids into a host cell and culturing the cell of express the proteins. N and P can be used in the prevention, diagnosis and AAB77789 represent sequences used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAM99166 to AAM99904 encode the human proteins given in AAM25225 to AAM35963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antiirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system, virucide; anti-HIV; fungicide; antimutagen;
                                                                                                                Isolated human polynucleotides encoding polypeptides, useful for treatment and diagnosis of e\,.g\,. cancer, ulcers and HIV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human protein encoding cDNA sequence SEQ ID NO:255.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 411; 1217pp; English.

This cDNA sequence codes for human DNAX Vic-1 (DVic-1) (see AAW60649),
a novel C-C chemokine. DVic-1 cDNA can be obtained from e.g. skin,
epithelial or wound healing libraries by PCR amplification or by
cepithelial or wound healing libraries by PCR amplification or by
cepithelial or wound healing libraries by PCR amplification or by
charles and are probably ESTS from a similar transcript. These show
chomology and are probably ESTS from a similar transcript. The
chemokine motifs of these 2 ESTS were compared, and a consensus
sequence was derived and confirmed as encoding Dvic-1. The Dvic-1
gene has been localised to human chromosome 9p13. An alternative
chomokine properties of these AAV88296 for human Dvic-1 is also disclosed.
Also claimed is novel human DNAX Groin Wound expressed CC chemokine
(DGWCC) (See AAW60649), as well as expression vectors and host cells.
Dvic-1 and DGWCC play a role in the regulation or development of
neuronal or haematopoletic cells, e.g. lymphoid cells, which affect
immunological responses. They can be used in the treatment of
conditions associated with abnormal physiology or development,
including abnormal proliferation, e.g. cancerous conditions or
degeneration, and atrophy may be modulated by appropriate
the requestion and atrophy may be modulated by appropriate
the requestion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  93 ctgatcgaacagcetcaettgtgttgetgtcagtgccagtagggcaggcaggaatgcage 152

                                             Modulating movement of a cell within or to the skin of a mammal can be achieved by administering an antegonist or agonist of cutaneous T cell-attracting chemokine (CTACK) or vasoactive intestinal contractor (Vic) chemokine. The antegonist is selected from a mutein of natural CTACK or Vic, an antibody which neutralises CTACK or Vic or an antibody which plock GPRZ ligand binding. The CTACK or Vic agonists or antagonists are useful for treating medical conditions or diseases associated with immunological conditions of the skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         332

consensus derived from several overlapping and/or extended cDNA clones. GFRP-2 is probably a CC chemokine and has chemical and structural homology with hTECK (20% identity). GFRP-1 and hTECK are both basic proteins, having isoelectric points of 10.1 and hTECK are both basic and nortumorous breast tissue. GFRP proteins (AAB0300-B0303), nucleotides encoding them (AAA5245-A5548), GFRP agonists and antagonists may be used to treat a wide variety of diseases associated with increased or decreased expression or activity of GFRP proteins. Conditions which may be treated include developmental disorders, cell proliferative disorders (e.g., cancers), immune disorders (e.g., allergies, asthma), reproductive disorders (e.g., menstrual cycle disorders) cardiovascular disorders (e.g., arteriosclerosis) and bacterial, viral, fungal or parastitc infections. Additionally, GFRP proteins and nucleotides can be used in the diagnosis of such disorders.
                                                                                                                                                                                                                                                                                                                                    3;

polymerase chain reaction (FRS) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymerase chain reaction (FRS) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat diseases states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequences and for this patent did not appear in the printed converting the printed converting the printed converting the convertion of the printed converting the converting converting the converting converting the converting c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gctcct-ggaaagagtgaatatgtgtcgcatccagagagctgatggggattgtgactt-g 325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      409
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       381
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          441

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes. Dolypeptide (II) sequences. (I) is useful as hybridisation probes. polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II); (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide for genefic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences.                                                                                                                             human secreted proteins, and encode the proteins given in AAY1531 to human secreted proteins, and encode the proteins given in AAY11533 to human secreted proteins, and encode the proteins given in AAY11533 to AAY11679, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for disponsals and therapy. The proteins obtained may have cytokine activity, call proteins obtained may have cytokine activity, call proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, receptor/ ligand activity, haemostatic and thromolytic activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity on other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                            ô

An antibody that recognizes the novel chemokine, or a chemokine-derived antigenic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can be used to treat breast disease. Antigenic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine can polynucleotide sequences and the chemokine protein can be detected in samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that polynucleotides include inflammations, infections, mastitis, benign cystitis, and benign hyperplasias as well as other malignancies. The present sequence represents the human mammary associated chemokine
                                                                vaccine; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A mammary associated chemokine and related polynucleotides, useful for detection and treatment of breast disease, especially cancer

It shows high homology to EST HOEDHIIR (see AAV38293) obtained from a human osteoblast library. The two ESTS are probably from a similar transcript. The chemokine motifs of the two ESTS were compared, and a consensus sequence was derived and subsequently confirmed as encoding human DNAX vic-1 (DVic-1) (see AAW60649), a novel C-C chemokine. CDNA (see AAV38291) encoding Dvic-lan be obtained from e.g. skin, epithelial or wound healing libraries. DVic-1 plays a role in the regulation or development of neuronal or haematopoietic cells, e.g. lymphoid cells, which affect immunological responses. It can be used in the treatment of conditions associated with abnormal physiology or development,
